The list does not represent an exact “science”, but is based on observations of various items of equipment. I try to use only 100 percent sure observations - but mistakes are possible anyway.

2017.06.16

Das Heereswaffenamt

(From various sources: Emil Leeb: Aus der Rusting des Dritten Reiches, Handbook on German Military Forces 1945 (US War Department), Richard D. Law: Backbone of the Wehrmacht, others)

Collectors and other observers of WWII German military artifacts, especially weapons, often see small die stamps on them with a stick figure representation of the German Reich eagle and a number. Commonly referred to as “Waffenamts”, they were inspection stamps which identified the item as being inspected and passed, at some stage of its manufacturing process for the German Army. Complex items such as firearms would have multiple Waffenamts on them. When the Nazis took power in 1933, Germany started a massive rearmament program. A part of this process was the Heereswaffenamt (He.Wa.A. – Army Ordnance Office) hereafter referred to as the HWA. The beginnings of the HWA were in the Waffen und Munitions beschaffungsamt of the First World War but the Waffenamt was founded officially by orders dated Nov. 8., 1919 and renamed as Heeres-Waffenamt on May 5., 1922.

German weapon inspections in the factories themselves were overseen by the Heeresabnahmewesen (Army Acceptance Organization), also known as the Abnahmeabteilung des Heeres Waffenamts (Wa.Abn. - Acceptance Section of Army Ordnance Office) hereafter referred to as the Abnahme. This group was a subsidiary of the HWA. The Heereswaffenamt was headed by General der Artillerie Professor Becker until sometime in 1940, when it was taken over by General der Artillerie Emil Leeb until its end in 1945.

Starting in 1935, the HWA grew along with Germany’s growing military rearmament program. With the onset of actual military operations, the HWA was dramatically expanded as the Army’s need for equipment and weapons increased rapidly.

In 1939 the Heereswaffenamt, including the Abnahme had:

		HWA (HeWaA)	Abnahme (WaAbn)
Offiziere	(Officers)	271	71
Beamte	(Officials)	352	234
Unteroffiziere	(NCO's)	174	132
Mannschaften	(Enlisted men)	<u>2800</u>	<u>2637</u>
		3597	3074

By 1940, the Abnahme had 25.000 men (estimated – based on the 1939 distribution ratios):

Offiziere	(Officers)	577
Beamte	(Officials)	1903
Unteroffiziere	(NCO's)	1074
Mannschaften	(Enlisted men)	<u>21637</u>
		25000

During its lifetime, the HWA and the Abnahme were reorganized as German needs changed. It was also subject to staffing reversals near the end of the war, and was reorganized in 1944 and again in 1945. Manpower shortages were such in the Wehrmacht, that in the middle of 1944, 8,000 Abnahme personnel were released for front line service, which cut its total personnel by one third. In the 1940 time frame the 25,000 Abnahme inspectors were in five Departments, which had 14 regional Armament Inspectorates. The Abnahme regional offices were located in: Königsberg, Breslau, Berlin, Dresden, Hannover, Erfurt, Nuremberg, Münster, Stuttgart, Vienna, Radom, Prague, Paris, and Brussels. There may have been a few additional areas in the occupied countries, but this has not been confirmed as to number or location. There was one Abnahmemeinspizient (Acceptance Inspector) in each Inspectorate area, who acted through the assigned personnel (Acceptance Commissions) at the various factories. The Abnahme themselves, because of their relatively small numbers, were oftentimes helped by specially trained factory personnel to assist them at some of the factories. The Abnahme were responsible for the testing and acceptance of all weapons, ammunition, and other items before delivery to the Wehrmacht. They were instructed on what to do by Technische Lieferbedingungen (TL's) issued by the various Waffenprüfamt sections listed below:

WaPrüf 1	Ballistische und Munitionsabteilung (Ballistics and Munitions Section of Army Ordnance [Ammunition]).
WaPrüf 2	Infanterieabteilung (Infantry Section of Army Ordnance)
WaPrüf 2 I	Rifles
WaPrüf 2 II	Machine Guns
WaPrüf 2 III	General Equipment
WaPrüf 3-12	Other Items

The inspection Officers and Officials of the Abnahme that were assigned to the various armament factories were originally Wehrmacht armourers, who were given civil service status and the rank (equivalent) of a Leutnant [W] (Waffenamt Second Lieutenant). In preparation for their duties the new personnel were sent to a four week Heereswaffenmeisterschule (Army Ordnance Armourers School) in Berlin at Spandau. At the end of the training, a Technical Inspector test was given, and if it was successfully passed the applicant

became an Oberleutenant [W] (Waffenamt First Lieutenant). By 1939 almost all of the personnel who had started in 1935 were promoted to Technical Inspector First Class with the equivalent rank of Hauptman [W] (Waffenamt Captain). As an example of how the system worked, 98K rifle production plants had an average of ten Officials employed at each factory that made the rifle. Several Ordnance and Technical Sergeants would also be assigned to each of the rifle manufacturers, as well as the Abnahme Mannschaften, and factory helpers as needed. At Mauser Werke, a very large factory, a Technical Administrator was assigned who had the rank of a Major [W]. In some cases, the acceptance location for a given area was used by surrounding factories as well, and was called an Heeres Bezirk Aabnahmestelle, (Army Area Acceptance place).

When a Waffenamt Officer (Acceptance Inspector) assumed command of an inspection team, he received a commission number and a corresponding numbered set of Wehrmaschtabnahmestempel (common term: Waffenamt Stamps). When the Waffenamt Officer was transferred to another factory, he took his stamps with him, but left the rest of his inspection team at the factory for the next Officer. The Waffenamt Officer in charge could move from one factory to another. Some examples are: (WaA214) at the J.P. Sauer in factory in Suhl in 1938, to the Berlin Lubecker Maschinenfabriken in 1939, or (WaA63) Mauser-Werke in Oberndorf a.N. (Germany) to BRNO in Czechoslovakia in 1940. These transfers were not uncommon. The total possible Waffenamt numbers ranged from 1 to probably 999, and any gaps most likely indicate a situation where no Waffenamt Inspectorates were activated. This is reflected in the actual number of known Waffenamt (Commission) numbers.

The Waffenamt stamps (dies) themselves often varied in size and sometimes design, depending on the time period when they were made or changed out. As dies were replaced, it was often with a simpler design as time went on, but with the same Waffenamt number. The different sizes and designs reflect a number of things, such as the size of the object being stamped, or the time period the die was made, or what the maker of a particular die stamp was capable of making at that time. Sometimes when old dies wore out, or broke, and could not be replaced in time, they reused old Waffenamt die stamps after modifying them. This practice is often seen with date stamps in 1944 as well, where they show only the number "4" instead of a "44". There are also a few die stamps which have an alpha character suffix in addition to the number, such as an: A, B, C, or D. And there were specialized inspection stamps used by the German Police and Luftwaffe as well. The Police stamps did not use numbers, but alpha characters instead. (Typically, it was the Police eagle along with alpha characters such as B, C, D F, K, or L). The Luftwaffe marked items have "Luft. (number)". There may be other variations as well.

See above some examples of WaA on starter tabs (from Myrvangs book about German MG's). The two first are early types. Ink stamps were used on cloth for example – beware of fakes – and the WaA could also be etched instead of being stamped.

There currently exists no official German book on Waffenamt codes as many believe. The headquarters in Wünsdorf not so far from Berlin was heavily bombed in the spring 1944 and was completely destroyed by bombing on March 15, 1945, so no archives from the Heereswaffenamt exist today, either in the USA or in Germany. After the first bomb attack the whole system was severely disrupted. It continued to function, but only marginally, until the war ended. Many factories produced war material practically to the German surrender. Some of these very late items may not show Waffenamts at all. Several factories produced weapons after the war was over, but without the Waffenamt stamps. However, there are usually other markings to differentiate them from wartime production.

Punched card. Pawlas has reprinted the so-called LK Nummern (lochkarte – punched card numbers). The lists indicate the structure of the "Abnahme" with places and with the LK numbers – but not the die-numbers. Because of personnel shortage in the "abnahme"-organisation, certain personnel at the factories were allowed to check the parts. This happened already in 1942, but only to a small extent. The "Betriebsabnahme" (BA) used a BA-number with 5 digits. There was also a "Werksabnahme" (W.ab) but apparently only at Tefefunken. The airforce – Luftwaffe – had in the same way personnel to control parts – the so-called Bauaufsichten der Luftwaffe (BAL) – see the very last part of the list. Source: Werner Thote – Radiobote Jg. 5, heft 29

Peter Rasmussen tells a funny story: He had about 1975 a visit by a German working for a well known German chemical company. The guest was J. G. Bayer and he had during the war inspected weapons for the Wehrmacht. Peter asked him about the function of the Waffenamt, but he answered reluctantly, because he wasn't allowed to reveal such information. Then Peter showed him a copy of the German codebook. He was chocked and said "aber das ist doch geheim" (but this is secret), and he became even more excited when he saw an enigma machine.

After such an excitement and a couple of "snaps" he became more accommodated and told that he had been a waffenampt inspector. He had had 10 enlisted men, 2 NCO's, 1 typist and a chauffeur. The enlisted men were engineers and metal craftsmen.

They used a decrepit Opel Blitz when visiting the different factories, and sometimes they divided so one team inspected one factory and their work with one set of dies, while the rest of the group went on to another factory with the other dies. Bayer's identification was WaA27 and the whole group used that number.

Bayer's inspection team had basis in Stettin and they inspected supply for the Wehrmacht in an area in a radius about 200 kilometres from Stettin. They should sometimes inspect goods they didn't know anything about. Once a quantity of cheese. Luckily one of the NCO's farther was a dairyman, so a phone call to him made it possible for the team to act quite professionally, and cheese was in a long time the main ingredient of the menu of the team.

Examples of dies

An example of an original, much used WaA die and 14 letter dies belonged to a precision engineer. The WaA number could be 539 – seen after using it on a pewter mug. The other photo shows 10 WaA-dies which have been on eBay, but the auction was canceled for some reason.

And again below an unused WaA63 stamp, also seen on eBay – and expensive. There is no WaA number on the side of the stamp.

WaA codes – WaA inspectors

The following list is made on the basis of observations from collectors both in Europe and America. It is likely that it may contain errors in some parts of it. In areas where I, or other specialists, have particular knowledge it should be relatively error free. Many of the dies used by the inspectors are very small, so it's very easy to sometimes misread the code numbers. *Please send me an E Mail, if you have detected an error in the list. Please also send me an E Mail, if you have an addition to the list. A notation of where it came from, or how certain the information is, would be appreciated.*

Phoney – cheat WaA markings

I often browse through different websides to discover some new WaA markings – especially eBay Deutschland. But beware those markings are often added lately – also because it's now so easy to buy new WaA-stamps. I will show you an example:

Only a part of the description is:

A very old magazinepouch made of leather – or was it for tools?. Maker: Max Stelzer, Berlin 1944. Eagle WaA524. Probably German Wehrmacht WW2. This find was made in an old store in an old wood chest. Script in old German type.

Below I have shown exactly the same pouch for a FN FAL type G1, and the markings are:
Max Stelzer, 68, Berlin, P Pr Bln

It's also tempting to put an extra bird on genuine parts for example on a K98k sling. That will boost the price. Be distrustful of ink WaA-markings. They are easily faked. The same can be said about WaA-markings in soft leather.

Below a pouch for medical instruments. The instruments are genuine, the pouch is possibly genuine, but the WaA-marking is made a long time after the war:

• _____ •

If practicable, names and addresses are taken from the outstanding German codebook: "Liste der Fertigungskennzeichen". Names of towns are given with their WWII time period German names. That means that some of the names will not be found on modern post war maps. For example: Brunn = Brno in Czeckia and Luttich = Liege in Belgium.

In connection with non German places two letters are mentioned. These letters are the country codes according to the Internet standard:

AT	Austria
BE	Belgium
CZ	Czech Rep.
DK	Denmark
ES	Spain
IT	Italy
FR	France
HU	Hungary
LV	Latvia

NL	Holland
NO	Norway
PL	Poland
RU	Russia
SK	Slovakia

German places – in die Bundesrepublik to day – are indicated with an abbreviation for one of the “Bundesländer”:

Bb	Brandenburg
Be	Berlin
BW	Baden-Württemberg
By	Bayern
Hb	Bremen
He	Hessen
Hh	Hamburg
MV	Mecklenburg-Vorpommern
Ni	Niedersachsen
NW	Nordrhein-Westfalen
RP	Rheinland-Pfalz
SH	Schleswig-Holstein
Sl	Saarland
Sn	Sachsen
ST	Sachsen-Anhalt
Th	Thüringen

Abbreviations of objects:

bay.	bayonet
Ber.	Beretta
Brng.	Browning
cln. kit	cleaning kit
el. equipm.	electrical equipment
flrgn.	flare gun
gren.	grenade
hol.	holster
mag.	magazine
mag. po.	magazine pouch
meas. instr.	measuring instrument
mu. co.	muzzle cover
pist.	pistol
rec.	receiver
rew.	reworked
Wal.	Walther
